Minnesota House of Representatives  
259 State Office Building  
100 Rev. Dr. Martin Luther King Jr. Blvd.  
Saint Paul, MN 55155

Dear Honorable Chairs and Ranking Members:

The Minnesota Department of Health (MDH) is required to report annually on the provision of hospital-based community benefit spending (Minn. Stat. section 144.699, subd. 5). This report provides an analysis of community benefit spending for Minnesota's hospitals between 2016 and 2019.

The report calculates that community benefit spending by Minnesota hospitals was \$1.3 billion in 2019, representing about 6.7 percent of the \$19.6 billion in hospital operating expenses that same year. Community benefit spending in 2019 rose 6.5 percent compared to 2018, though levels of growth were lower in 2018 and 2017 (1.8 percent and 4.2 percent, respectively). Much of the increase in 2019 community benefit was led by growth in state health care program underpayments – state public program payments falling short of

HOSPITAL COMMUNITY BENEFIT SPENDING IN MINNESOTA, 2016 TO 2018

estimated costs - and operation of subsidized services, such as emergency departments, burn units, and obstetrics units.

Overall, hospital community benefit spending during this period remained skewed to the delivery of *patient services* (charity care, subsidized services and underpayments for state public programs). Spending for community-facing activities, including community health care services, accounted for less than five percent of total community benefit.

Questions or comments on the report may be directed to Stefan Gildemeister, Director of the Health Economics Program, at (651) 201-3550.

Sincerely,

A handwritten signature in black ink, appearing to read "Jan K. Malcolm". The signature is fluid and cursive, with a long horizontal stroke at the end.

## Introduction

With around one-third of health care spending in Minnesota associated with care delivered in hospital inpatient and outpatient departments, hospitals represent a key part of the health care delivery system. They also act as an important economic resource for many communities by providing jobs across a wide spectrum of skill sets.

Among their contributions, hospitals typically provide a range of community benefit services with a few different motivations. Of course, hospitals provide community benefit in support of their mission and their historical role as key members of the community. But non-profit hospitals also are required to satisfy their obligations as tax-exempt organizations under state and federal tax laws - over 99 percent of community hospitals in Minnesota are nonprofit or government institutions (80.5 percent and 18.8 percent, respectively). In addition, the Patient Protection and Affordable Care Act of 2010 (ACA) created the requirement that tax-exempt organizations conduct periodic Community Health Needs Assessments (CHNA) and implement strategies to address those needs.

One way to understand how hospitals contribute to communities is to analyze the volume of community benefit, or spending on programs that, including the delivery of free and discounted care, promote community health.<sup>1</sup> Community benefit spending typically falls into one of the following broad categories which, as shown in Table 1, can be further disaggregated:

- Direct patient care;
- Research and education;
- Financial and in-kind contributions; and
- Community activities.

Minnesota law began requiring that the state's community hospitals annually report spending on community benefit in 2007.<sup>2</sup> The statute specifically defines the meaning of community benefit to consist of certain types of spending and services and explicitly excludes bad debt and underpayments for Medicare services (see Table 1). At the time, this requirement filled a critical gap in available comparable information.<sup>3</sup> Although more information has become available nationally since then, concerns about policy relevance of the national information<sup>4</sup> make these Minnesota data relevant for informing the public about how hospitals in the state carry out their charitable obligations. This report provides an update on community benefit spending for Minnesota community hospitals between 2016 and 2019.<sup>5</sup>

---

<sup>1</sup> James J. "Nonprofit Hospitals' Community Benefit Requirements," Health Policy Brief, Health Affairs, February 2016.

<sup>2</sup> Minnesota Statutes, Section 144.699, subdivision 5.

<sup>3</sup> Since 2010, the Affordable Care Act (ACA) has required all nonprofit hospitals to file an additional tax form (Schedule H for Form 990) which lists community benefit spending. This requirement does not extend to government or for-profit hospitals.

<sup>4</sup> Bai G., Zare H., et al. "Analysis Suggest Government and Nonprofit Hospitals' Charity Care is Not Aligned with their Favorite Tax Treatment," Health Affairs 40(4), 2021.

<sup>5</sup> Community hospitals are general acute care hospitals (not speciality hospitals) that have at least some level of local control.

**Table 1: Community Benefit Categories**

	Category	Definition or Examples
Direct Patient Care or Unreimbursed Services	<i>Charity care</i> <sup>1</sup>	Cost of care provided at a free or reduced amount. Charity care is care provided with no expectation of payment and is separate from bad debt. Sometimes called Community Care.
	<i>State health care programs underpayments</i> <sup>2</sup>	The difference between payments for services provided to state public program clients and the cost of providing these services, which may exceed payments.
	<i>Operating subsidized services</i>	The costs of services that are operated at a financial loss. Examples include trauma services, burn units, and neonatal intensive care units.
	<i>Community health services cost</i>	Examples include community health education, community based clinical services such as free clinics and screenings, health support services, and self-help programs.
Research and Education	<i>Research</i>	The cost of conducting research, including clinical research and community health research.
	<i>Education</i>	The cost of providing medical education. Examples include a student internship in clinical settings and scholarships for professional education.
Financial and In-Kind Contributions	<i>Financial and in-kind contributions</i>	Examples include hours donated by staff and overhead expenses of space donated to not-for-profit community groups.
Community Activities	<i>Costs of community building activities</i>	Examples include economic development activities, community support system enhancements, environmental improvements, and leadership development training for community members.
	<i>Costs of community benefit operations</i>	The cost associated with dedicated staff, and other costs associated with community benefit strategy and operations.

Notes: Categories of community benefit are defined in [Minnesota Statute, Section 144.669, Subd. 5](#). These categories are based on definitions established through national discussions by hospital leaders.<sup>6</sup> Similar, but not identical, categories are used for federal IRS reporting on the [Form 990 Schedule H](#).

1/ Charity care does not include bad debt write-offs, where there was an expectation of payment at the time of services.

2/ State program underpayments only includes Medical Assistance (Medicaid) and MinnesotaCare, the two state-administered public health care programs; per state law and consistent with other national standards and requirements, this category explicitly excludes differences between payments and actual costs for Medicare patients.

<sup>6</sup> VHA, Inc. and Catholic Health Association. "Community Benefit Reporting: Guidelines and Standard Definitions for the Community Benefit Inventory for Social Accountability" 2006; <https://www.mnhospitals.org/Portals/0/Documents/data-reporting/commben-guidelines.pdf>

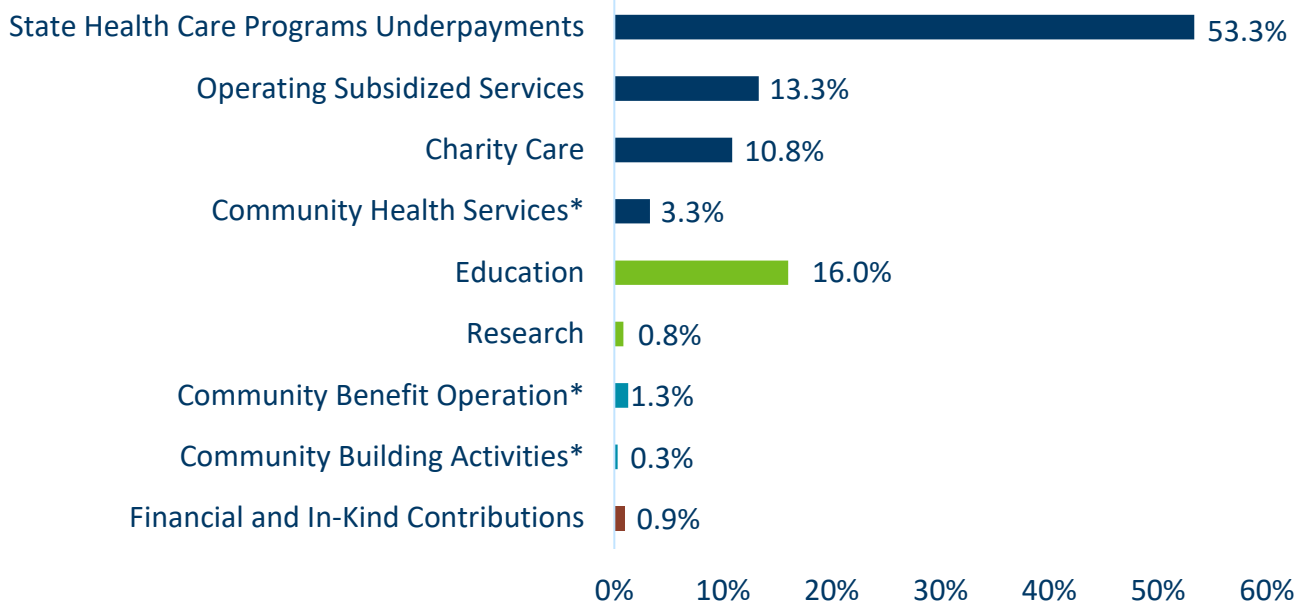

# How Hospital Community Benefit Dollars Were Spent in 2019

## Key Findings

- Hospitals reported \$1.31 billion in community benefit spending in 2019, or 6.7 percent of the \$19.6 billion in operating expenses.
- Over half of community benefit dollars were accounted for by state health care program underpayments.

Minnesota community hospitals, or non-federal facilities, nearly all of which are non-profit or government affiliated, reported \$1.3 billion in spending on the statutory categories of community benefit in 2019, representing 6.7 percent of their total operating expenses of \$19.6 billion.<sup>7</sup> Direct patient care has historically accounted for the majority of hospital community benefit; in 2019 it represented 80.7 percent, or \$1.1 billion (Figure 1). Direct patient care includes state health care program underpayments, operating subsidized services, charity care and community health services.

**Figure 1: Where did Community Benefit Dollars Go in 2019?**

Source: Minnesota Department of Health, Health Economics Program analysis of Hospital Annual Reports. Numbers may not sum to total due to rounding.

\* These three categories are referred to as 'community-facing activities' throughout this report.

<sup>7</sup> All community benefit spending is reported *net of revenues*. For example, subsidized services, such as the emergency department, earn revenue; the amount reported is the cost to the hospital for operating those services after revenue is accounted for. Community benefit related to charges for services (state health care program underpayments and charity care) are also adjusted by a hospital-specific cost-to-charge ratio; this accounts for the difference between charges for a services, and what it costs to deliver those services.

State health care program underpayments (see description below) accounted for over half of community benefit spending (\$699.1 million), and nearly two-thirds of direct patient care community benefit in 2019.<sup>8</sup> Hospitals provided free or reduced-cost care to patients through charity care in the amount of \$142.0 million. Provision of direct patient care through emergency departments and other departments, such as burn centers, that are staffed regardless of use and profitability, are considered *subsidized care*. This care accounted for \$174.1 million (13.1 percent) of community benefit spending.<sup>9</sup> Community health services – clinics and screenings offered at no cost to the community – represented only 3.3 percent of community benefit spending (\$42.8 million).

### State Public Program Underpayments

This category of community benefit is based on the notion that hospitals accept payments below actual costs of providing services for enrollees in Minnesota State Health Care programs (Medical Assistance and MinnesotaCare). The amount is calculated by subtracting payments received from Medical Assistance and MinnesotaCare from hospital charges adjusted to approximate costs – if the adjusted charges are higher than payments received, that amount is considered an underpayment.

There are two main weaknesses associated with estimating these underpayments: First, charges and the way they are derived vary by hospital, and although the adjustment uses one consistent method, adjusted charges may not necessarily compare well to underlying costs. These adjusted charges also do not appropriately reflect differences in facility cost-effectiveness. Second, capturing underpayments as community benefit does not account for the fact that, absent state public programs, a substantial proportion of the cost of these services might otherwise remain unreimbursed as charity care or bad debt. Bad debt is not a recognized form of community benefit at either the state or federal level.

Nevertheless, these state program underpayments are considered community benefit under most frameworks, including the one established by the Internal Revenue Services.<sup>10</sup>

Spending on education and research accounted for \$220.3 million. As has been the case in previous years, the majority of these expenditures are delivered by hospitals with more than 200 beds (89.4 percent of education costs and 69.9 percent of research costs), including teaching hospitals, and facilities located in urban areas.

The remaining two categories of hospital-based community benefit spending, financial and in-kind contributions and community activities, each represented a much smaller percentage of total community benefit in 2019 (0.9 percent and 1.6 percent respectively), or \$32.9 million.

<sup>8</sup> State health care program underpayments are calculated as the difference between the total charges for state public program services, multiplied by a hospital-specific cost to charge ratio, and the actual payments received for those services. The cost to charge ratio is calculated by dividing the amount it costs to provide care (total operating expenses) by the amount charged for providing care (total charges from patient care plus other operating revenue). In 2019, cost to charge ratios range from 27.8 percent to 99.4 percent, with a median of 49.1 percent.

<sup>9</sup> As with all community benefit calculations in this report, this amount is net of reported revenue from the subsidized services.

<sup>10</sup> James J. "Nonprofit Hospitals' Community Benefit Requirements," Health Policy Brief, Health Affairs, February 2016.

## HOSPITAL COMMUNITY BENEFIT SPENDING IN MINNESOTA, 2016 TO 2019

Three categories of community benefit, community health services, community benefit operations, and community health activities (denoted with an \* in Figure 1) are specifically community-facing activities, two of which are not direct patient care. Of the \$20.9 million spent on these two activities, around four-fifths of spending (\$16.8 million) is focused on the staffing associated with efforts by hospitals to drive health improvement activities including community engagement and economic development in the area around each hospital (community benefit operation); an additional \$4.1 million is focused on the community building and development activities themselves. When these community building activities are combined with efforts the hospital undertakes to enhance population health through direct services (community health activities), hospitals were directing just \$63.7 million of the \$1.3 billion in total community benefit spending toward what many may think of as higher priority, community-facing activities to drive upstream improvements in the underlying determinants of population health. A review of several hospitals' implementation plans for community engagement found that many community-facing projects were collaborations with other community entities, including participation on task forces or advisory councils. The higher costs of staff and labor costs compared to material costs for programs could explain the higher spending on community benefit operations.

## How Hospital Community Benefit Changed Between 2016 and 2019

### Key Findings

- Community benefit spending increased by 13.0 percent, or \$150.4 million, between 2016 and 2019.
- Growth in state health care program underpayments and operation of subsidized services led to much of the increase across the three years, with each increasing \$118.6 million and \$51.4 million respectively.
- Modest increases were seen across the three years in community-facing activities; community health services (\$2.4 million) and community activities (\$2.8 million).
- Declines were seen across the three years in education and research (-\$43.3 million jointly) and financial/in-kind contributions (-\$5.3 million).

Between 2016 and 2019 hospitals increased their absolute dollar spending on community benefit year over year, but saw a steady rate as a percent of operating expenses, ranging from 6.7 percent in 2016 and 2017, 6.6 percent in 2018, and 6.7 percent in 2019.<sup>11</sup> The percent of operating costs varied greatly between individual hospitals, from 25 percent to less than 1 percent, but that variability was present in all years.

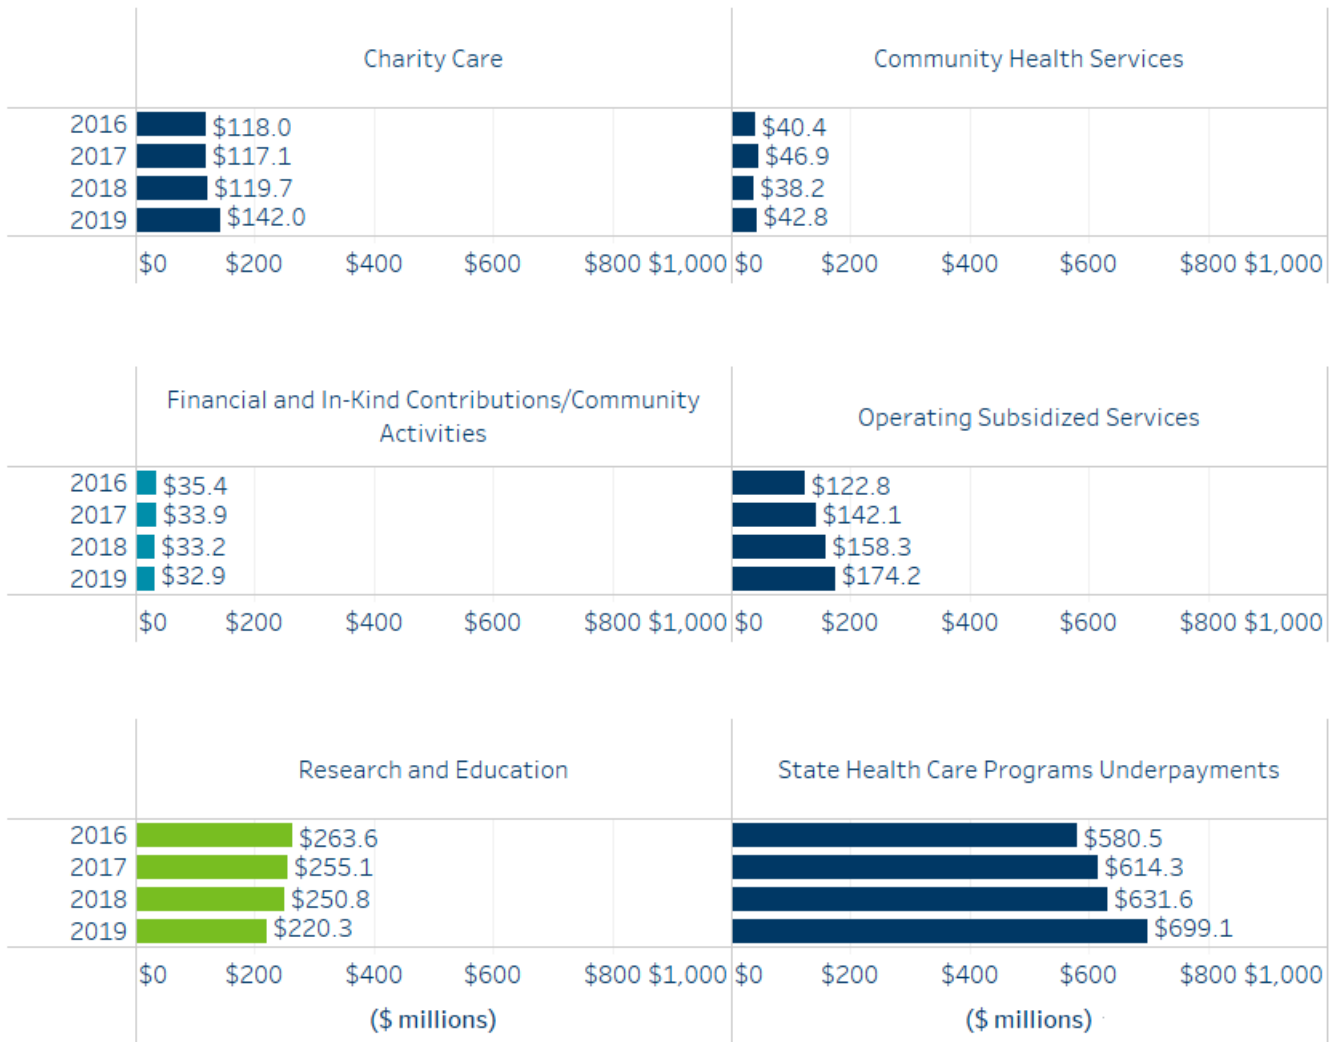

While Figure 2 displays the absolute community benefit dollars by reporting category, the overall distribution of spending across categories stayed largely unchanged, with the same three categories accounting for over three quarters of community benefit spending across all years:

- State public health care program underpayments accounted for about half of community benefit (50.0 percent in 2016 and 53.3 percent in 2019);
- Spending on research and education accounted for about one-fifth (22.7 percent in 2016 and 16.8 percent in 2019); and
- Spending on operation of subsidized services another one-tenth (10.6 percent in 2016 and 13.3 percent in 2019).

---

<sup>11</sup> The available data indicate an average of between 7 and 8 percent of operating expenses devoted to community benefit nationally. It is important to note that due to differences in state public health care programs, the exposure of hospitals to both state public program underpayments and uncompensated care also varies. For example, see Young, GJ, Flaherty, S, Zepeda, ED, Singh, SR and Cramer, GR. "Community Benefit Spending by Tax-Exempt Hospitals Changed Little After ACA." *Health Affairs* 2018, 37(1): 121-124.

**Figure 2: Distribution of Community Benefit Spending, 2016 to 2019**

Source: Minnesota Department of Health, Health Economics Program analysis of Hospital Annual Reports

While overall community benefit spending increased 13.0 percent between 2016 and 2019, not all categories grew or changed in similar ways (Table 2). The largest increases in this time period were seen in direct patient care, with the operations of subsidized services increasing 41.8 percent (\$51.4 million) and charity care and state program underpayments increasing around 20 percent each (\$23.9 and \$118.6 million respectively). The largest decreases were seen in financial and in-kind contributions, which fell 30.6 percent (\$5.3 million) and education, which fell 17.8 percent (\$45.5 million). Despite the substantial decrease, education in 2019 remained the second-largest category of community benefit, after state program underpayments.

The largest percentage increase was seen in the operation of subsidized services (41.8 percent), which saw a 10 percent increase in the costs of services from 2016 to 2019, with a corresponding 2

percent decrease in revenue in that same time. Utilization of these subsidized services also did not increase greatly over the same time period. For example, the volume of ED visits increased 2.5 percent and births in the state increased 1.1 percent between 2016 and 2019.<sup>12</sup>

**Table 2: Minnesota Hospital Community Benefit by Category, 2016 to 2018**

Community Benefit Category	Community Benefit Spending (\$ Millions)				Percent Change 2016 to 2019
	2016	2017	2018	2019	
<i>Direct Patient Care</i>	\$861.8	\$920.4	\$947.8	\$1,058.0	22.8%
Charity Care	\$118.0	\$117.1	\$119.7	\$142.0	20.3%
State Health Care Programs	\$580.5	\$614.3	\$631.6	\$699.1	20.4%
Underpayments					
Operating Subsidized Services	\$122.8	\$142.1	\$158.3	\$174.2	41.8%
Community Health Services	\$40.4	\$46.9	\$38.2	\$42.8	5.8%
<i>Research and Education</i>	\$263.6	\$255.1	\$250.8	\$220.3	-16.4%
Education	\$255.0	\$245.7	\$238.7	\$209.5	-17.8%
Research	\$8.6	\$9.4	\$12.0	\$10.8	25.1%

<b>Total Community Benefit</b>	<b>\$1,160.7</b>	<b>\$1,209.4</b>	<b>\$1,231.7</b>	<b>\$1,311.1</b>	<b>13.0%</b>
<b>As a Percent of Operating Expenses</b>	<b>6.7%</b>	<b>6.7%</b>	<b>6.6%</b>	<b>6.7%</b>	

Source: Minnesota Department of Health, Health Economics Program analysis of Hospital Annual Reports

After three relatively stable years, charity care jumped 18.6 percent from 2018 to 2019. When charity care is broken out by insurance status (Figure 3), that increase was primarily seen in charity care extended to uninsured Minnesotans. Nearly half of 2019’s charity care dollars (\$185.0 million) went towards the full forgiveness of uninsured patients’ hospital bills. A comparison of charity care to bad debt, the other component of uncompensated care which is not included in community benefit, shows that bad debt had been rising steadily year-over-year from 2016 to 2019.<sup>13</sup> It is not clear if the increase in charity care in 2019 was related to a change in who presented for care, a means to shift some of the uncompensated care into a form that would provide hospitals an increased community

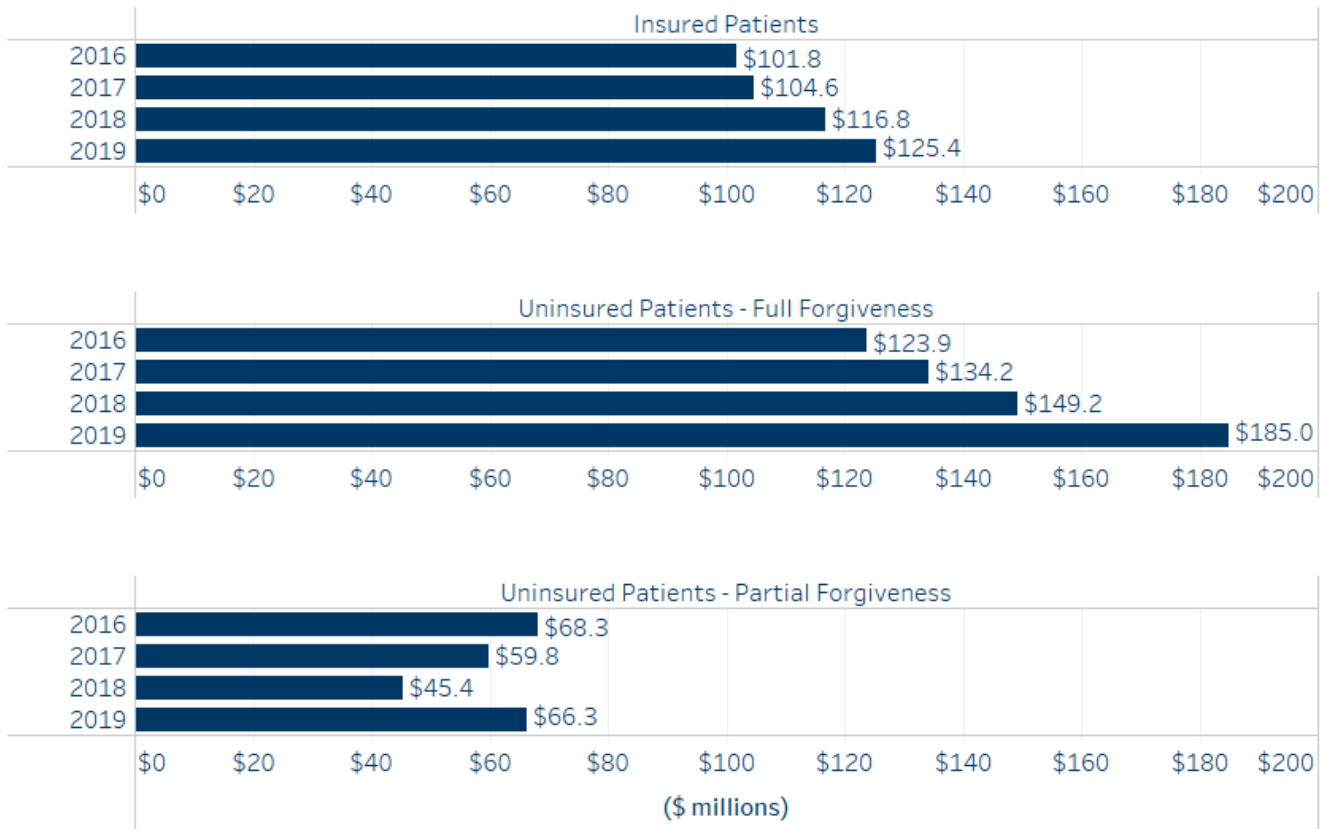

<sup>12</sup> Minnesota Department of Health, Health Economics Program unpublished analysis of Hospital Annual Report data

<sup>13</sup> Charity care is care for which hospitals never expect to be reimbursed. Bad debt is incurred when hospitals cannot obtain reimbursement for care provided to patients who appear not eligible for free or discounted care. The comparison of bad debt to charity can be found in Chartbook 6: <https://www.health.state.mn.us/data/economics/chartbook/docs/section6.pdf>

HOSPITAL COMMUNITY BENEFIT SPENDING IN MINNESOTA, 2016 TO 2019

benefit, or something else. There is no indication that there was a substantial increase in the number of uninsured or other changes in coverage between 2018 and 2019 to drive this change.<sup>14</sup>

## Community Benefit by Hospital Characteristics

Data for 2019 illustrate that there are hospital-to-hospital and geographic differences in what share of total spending was devoted to community benefit and how that spending was distributed across community benefit categories. To demonstrate: in 2019, individual hospitals spent between \$5,000 and \$157 million on community benefit; some hospitals dedicated a quarter of their operating expenses to community benefit, while others reported spending next to nothing. Minnesota's only for-profit community hospital reported no community benefit three of the four years of this analysis.

### Key Findings

- Smaller hospitals, often in rural areas, saw the greatest increase in community benefit spending between 2016 and 2019.
- A greater percentage of these hospitals' community benefit also went to direct patient care.
- Nearly all research spending was reported by large, urban hospitals.

Table 3 provides a broad overview of community benefit spending by hospital characteristics, although overall trends were driven by larger and urban hospitals. Hospital-level data can be found in Appendix Tables A1 through A5.

Urban hospitals (including those in the Twin Cities and cities such as Duluth, Rochester and St. Cloud) provided the largest portion of total community benefit dollars in 2019, or about 81.1 percent. All of the top ten providers of spending on community benefit were urban hospitals.<sup>15</sup> Much of this can be a function of size, as Minnesota's largest hospitals are in urban areas.

While urban hospitals provided a greater share of total community benefit dollars, the hospitals in smaller, rural communities devoted a larger *share* of their operating expenses to community benefit. These facilities also saw more of their community benefit go to direct patient care (95.4 percent), compared with urban facilities (75.9 percent) who had greater expenses in research and education.

How the direct patient care dollars were focused varied somewhat:

- Isolated, small town hospitals devoted 55.3 percent of community benefit to operating subsidized services in 2019, compared to 11.7 percent of the total for urban hospitals;
- Critical access hospitals devoted 31.8 percent of community benefit to operating subsidized services in 2019, compared to 11.0 percent of the total for non CAHs;
- Hospitals in larger rural cities, such as Bemidji and Marshall, saw 74.8 percent of their community benefit going towards state health care programs underpayments, largely as a result of the role of these payers in their overall patient population.

<sup>15</sup> The geographic distinction between urban and rural facilities is derived based on Rural Urban Commuter Area (RUCA) codes, using the hospital zip code. See Appendix A (Figure A1).

## HOSPITAL COMMUNITY BENEFIT SPENDING IN MINNESOTA, 2016 TO 2019

Hospitals that were not designated as critical access hospitals (CAH) contributed more in community benefit than CAHs. In 2019, hospitals that were not CAHs spent on average nearly \$23 million, versus less than \$2 million spent on average by CAHs. This is mostly a function of size, as when community benefit is taken as a percentage of operating expenses, the difference becomes much less apparent. That percentage was 6.5 percent for CAHs and 6.7 percent for non-CAHs in 2019.

Many of the hospitals in isolated small towns are CAHs, which requires them to offer certain services to obtain higher reimbursement rates from Medicare. This may increase their focus on operating subsidized services. A hospital's status as a CAH also affected other areas of community benefit. In 2019, CAHs saw 2.9 percent of their community benefit go towards education, compared to 17.6 percent for non-CAHs. In contrast, CAHs apportioned a larger percentage of their community benefit toward community building activities than non-CAHs (1.5 percent and 0.2 percent respectively).

Another characteristic that shows differences in community benefit spending is a hospital's affiliation with a health care system. Affiliated hospitals spent roughly twice as much of their community benefit dollars on education and financial and in-kind contributions than independent hospitals. In contrast, independent hospitals spent more on operating subsidized services and devoted a larger percentage of their operating costs to community benefit (9.9 percent compared to 6.1 percent in 2019).

Government hospitals continued to provide a larger share of their operating expenses toward community benefit;<sup>16</sup> however, the distribution of community benefit is very similar between government and nonprofit hospitals. The one area that is an exception is research; no government hospitals put any community benefit towards research in 2019.

---

<sup>16</sup> This trend is driven by Hennepin Healthcare, which accounts for two-thirds of community benefit provided by government hospitals.

**Table 3: Hospital Community Benefit by Hospital Characteristics, 2016 to 2019**

	No. of Hospitals (2019)	Total Community Benefit (\$ millions)				Change, 2016 to 2019	Percent of Operating Expenses (2019)
		2016	2017	2018	2019		
<b>All Hospitals</b>	128	\$1,160.7	\$1,209.4	\$1,231.7	\$1,311.1	13.0%	6.7%
<b>Number of Beds<sup>1</sup></b>

Appendix Table A6 provides community benefit, change to 2019 and percent of operating expenses by hospital characteristics for all years.

<sup>1</sup> Number of beds refers to *available* beds, which are acute care beds that are immediately available for use or could be brought on line within a short period of time.

<sup>2</sup> Affiliated refers to a hospital that is part of a larger medical care system of more than one hospital, as opposed to an independent hospital. A Critical Access Hospital (CAH) is a federal designation for a rural hospital that meets certain criteria.

<sup>3</sup> Urban and Rural status is based on Rural Urban Commuter Area (RUCA) codes, using the hospital zip code. See Map in Appendix A (Figure A1).

## Summary and Discussion

While community benefit increased year-over-year for Minnesota hospitals, their contribution relative to their operating expenses remained consistent with the past. In aggregate, Minnesota hospitals continued to devote considerable resources towards their obligations as non-profit, tax exempt entities. As these resources are linked to specific hospitals, community benefit spending largely reflects the geographic distribution of facilities, their relative size, and local conditions, including processes for decision-making. As such, community benefit dollars are not evenly distributed across communities of the state.

In terms of dollars spent, the hospitals that drive community benefit are generally large urban hospitals. The ten hospitals with the highest community benefit (out of a total of 128) contributed 57 percent of the total. None of these hospitals are critical access hospitals, and they are almost exclusively urban and more likely to be affiliated with a health care system. While the larger, urban affiliated hospitals contribute the majority of dollars to community benefit statewide, they actually contribute a smaller percent of their operating expenses to community benefit. The ten hospitals with the highest percentages are mostly rural, more likely to be CAHs and more likely to be independent.

In 2019, community hospitals delivered more than \$1.3 billion in a mix of health care services, research and medical education, and activities aimed at supporting communities that hospitals are embedded in. At the same time, community benefit spending remained heavily skewed toward the provision of services to hospital patients, including charity care and state public program underpayments, as well as a range of other services which are considered not sufficiently reimbursed. As in previous years, the cost of delivering community building activities – economic development activities, community support system enhancements, environmental improvements – accounted for less than two percent of total community benefit spending, with the vast majority of the nearly \$21 million (80 percent in 2019) actually devoted to the costs of administration for these activities, including staffing. The other community-facing activity, direct patient care related to community health, such as free clinics and screenings, accounted for another 3.3 percent, about \$43 million of spending.

Under updated IRS community benefit requirements following the passage of the ACA, hospitals have an obligation to ensure this spending aligns with community needs through community health needs assessments (CHNA) conducted every three years.<sup>17</sup> At this point, many hospitals have completed three iterations of CHNAs, often in collaboration with their local public health departments, which allowed for a review of methods and results<sup>18</sup>. Wide variability was seen in CHNA designs, with some

---

<sup>17</sup> IRS Statutes, Section 1.501(r)3

<sup>18</sup> For this report, we reviewed CHNAs for a select few hospitals and health systems to obtain a high level understanding of their use in Minnesota (Hennepin Healthcare, Lake Region Healthcare, the M Health Fairview system, and the Ridgedale system).

health care systems using a system-wide approach, rather than a hospital-specific one, that made understanding and addressing specific community needs more challenging. A commonality in the CHNAs reviewed was the distinction between health issues such as mental health or chronic conditions and social determinants of health (SDOH) such as poverty and employment. Approaches to health issues mainly took the form of process changes or implementation within the hospitals or community clinics, while addressing SDOH was approached through community collaborations. In several of the CHNAs the areas of focus were static, addressing the same target areas over the years with a continuation of existing programs or collaborations. Goal-setting in most of the CHNAs reviewed was vague, which will make evaluation of progress difficult.

MDH is looking to improve the collaboration between hospitals and local public health in both the design of CHNAs and the implementation of recommendations. To better address the social determinants of health and health disparities present in the state, MDH's Office of Rural Health and Primary Care is launching a project as a part of a Centers of Disease Control and Prevention (CDC) COVID-19 Health Equity Grant program. The program will give out grants to rural communities to pilot efforts to collaborate on health assessments in a way that reduces disparities, increases diverse decision-making voices, results in new ideas for long-term policy changes and provides resources needed to sustain this kind of collaboration going forwards. While some larger hospital systems already have some of these resources in place, smaller systems and individual hospitals will benefit from this additional support.

Looking beyond the 2019 data in this report, we would expect to see changes to community benefit due to the COVID-19 pandemic, whether through receiving funds or finding higher community need. Reviewing preliminary data, it appears that community benefit increased in Minnesota hospitals from 2019 to 2020 and, due to a drop in operating expenses, accounted for a larger percentage of those operating expenses. The increase in community benefit appears to be driven by state health care underpayments, likely the result of broader Medicaid eligibility due to federal actions. Preliminary increases were also seen in charity care and community benefit operation. Preliminary decreases were seen in all other categories of community benefit, most notably education. It is important to note that spending for activities that are most directly geared towards the community, community health services and community building activities, decreased, likely in part because providing these services was made more difficult by diverted priorities and the inability to gather during the pandemic.

Moving forward, MDH hopes to document further progress and partner with hospitals in their work to pivot towards addressing upstream issues of social determinants and equity in the larger community, in conjunction with communities and local public health.

All Costs are net of offsetting revenues.

1 Charity care charges are adjusted to reflect costs

2 Calculated as the difference between payments for services provided to public program enrollee and the cost of providing those services. Where there were no calculated underpayments, this category is zero.

All Costs are net of offsetting revenues.

1 Charity care charges are adjusted to reflect costs

2 Calculated as the difference between payments for services provided to public program clients and the cost of providing those services. Where there were no calculated underpayments, this category is zero.

All Costs are net of offsetting revenues.

1 Charity care charges are adjusted to reflect costs

2 Calculated as the difference between payments for services provided to public program clients and the cost of providing those services. Where there were no calculated underpayments, this category is zero.

All Costs are net of offsetting revenues.

1 Charity care charges are adjusted to reflect costs

2 Calculated as the difference between payments for services provided to public program clients and the cost of providing those services. Where there were no calculated underpayments, this category is zero.

All Costs are net of offsetting revenues.

<sup>1</sup> Number of beds refers to *available* beds, which are acute care beds that are immediately available for use or could be brought on line within a short period of time.

<sup>2</sup> Affiliated refers to a hospital that is part of a larger medical care system of more than one hospital, as opposed to an independent hospital. A Critical Access Hospital (CAH) is a federal designation for a rural hospital that meets certain criteria.

<sup>3</sup> Urban and Rural status is based on Rural Urban Commuter Area (RUCA) codes, using the hospital zip code. See Map in Appendix A (Figure A1).

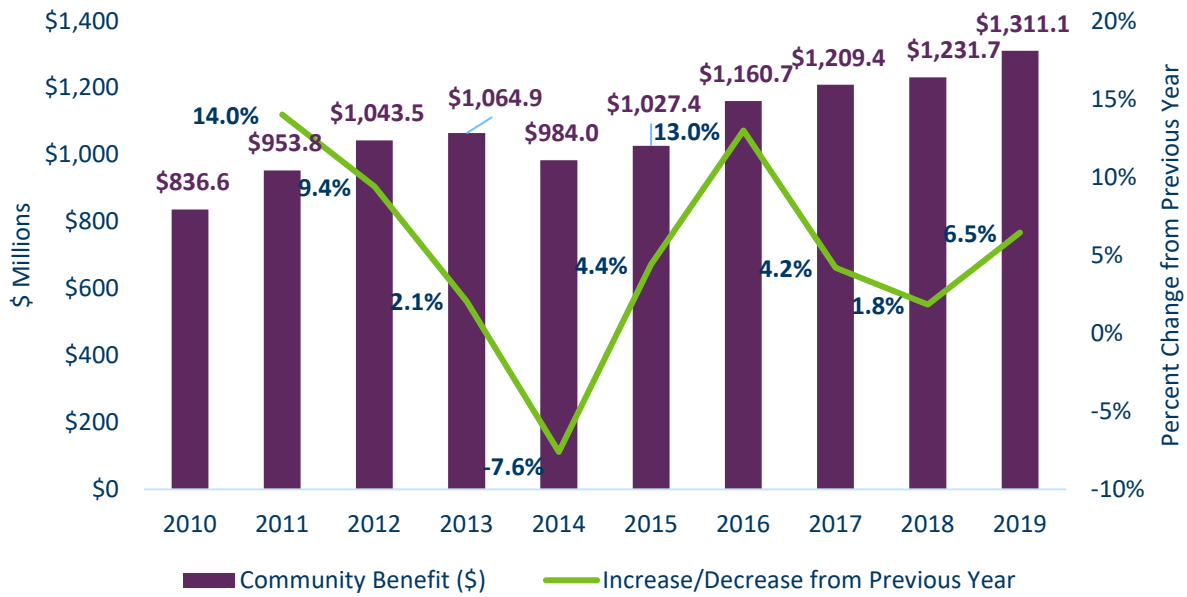

**Figure A1: Map of Rural Urban Commuting Area (RUCA) codes and Minnesota Community Hospitals**

Source: Minnesota Department of Health analysis of Hospital Annual Report Data and data from the United States Department of Agriculture, Economic Research Service retrieved November 17, 2017 from the following web address: <https://www.ers.usda.gov/data-products/rural-urban-commuting-area-codes.aspx>.

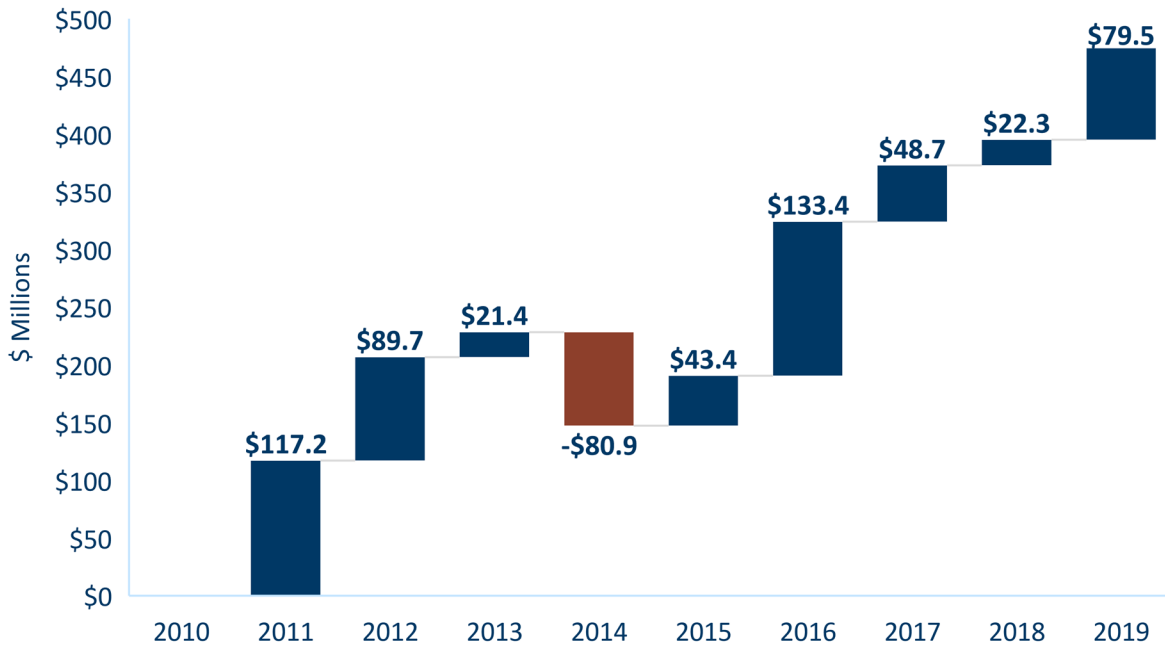

RUCA codes were developed to better characterize urban/rural status by recognizing their relationship with work and commuting patterns, and independent of county boundaries. This takes into account counties which may be rural in nature but encompass a city, in turn labeling the county as urban. An example is the city of Duluth, which could skew St. Louis county in appearing to be urban.
