

Key lessons from nearly 25 years of analyzing health care spending in Minnesota

1. Despite ongoing attempts to limit health care spending growth, it continues unabated.
2. Health care spending growth outpaces income growth, economic progress, and inflation.

\$9,028
WAS SPENT
PER PERSON
IN 2017

HOSPITAL SPENDING
WAS RESPONSIBLE
FOR 2/5 OF 2017
SPENDING GROWTH

LONG-TERM CARE COST ARE
MAINLY ATTRIBUTABLE TO
MEDICAID AND OUT OF POCKET

For additional information and the complete report, please visit the Minnesota Department of Health, Health Economics website at www.health.mn.gov/data/economics

OVER THE PAST 20 YEARS

Individuals paid more of the costs through premiums and out of pocket

2X INCREASE IN
PRIVATE HEALTH
INSURANCE SPENDING

4.5X INCREASE IN
INDIVIDUAL COSTS

Source: MDH Health Economics Program. Individuals' estimated costs, including cost-sharing and enrollee premiums, are based on health plan reports for the Minnesota fully-insured commercial market between 1998 and 2017. All other data reported in this infographic is based on total health care spending for Minnesota residents.
