

# Animal Blastomycosis in Minnesota by Year, 1999-2023 (n=2883)

Past 5 years median:  
258 cases/year

## Year

In 2016, direct reporting from laboratories was initiated. In 2020 and 2021, response to the COVID-19 pandemic affected surveillance. Reports of positive lab tests were received in 2020-2022 but no clinical information was received from the veterinarian, therefore they do not meet the case definition. These are shown in light teal.
