

# MnVFC Patient Eligibility Screening Record: Private Clinic

## CHILDREN 18 YEARS OF AGE OR YOUNGER

- Screen each patient for MnVFC eligibility at each immunization visit. Use this same record for all subsequent visits if the patient’s eligibility status has not changed. If it changed, start a new form.
- Keep this record (or an equivalent paper or electronic record) for three years. For MnVFC summary reports, you also need a system for easily retrieving data on the number of patients immunized each year in each eligibility category.
- If a child is insured but the parent does not know if immunizations are covered, have the parent call the number on the back of their insurance card to get more information on immunization coverage.
- Children that are **underinsured** are only able to receive MnVFC vaccines at local public health clinics (LPH), Federally Qualified Health Centers (FQHCs), Rural Health Centers (RHCs), Indian Health Service (IHS), and tribal health clinics. **Please let patients know that if immunizations are not covered by their insurance, they could receive a bill for immunizations given at private clinic sites.**

**Subsequent visits: Date/initial if response has not changed. If it has changed, start a new form.**
